The author emphasizes practical, ongoing evaluation strategies that involve all program stakeholders, not just evaluation experts, and presents a simple and effective standards-based four-step model that will produce rich and useful results. The book's resources (scenarios, worksheets, and guidelines) can be used throughout the planning, implementation, and evaluation process. In addition, each chapter includes a list of learning objectives, key terms, and ideas for review, as well as summaries and discussion questions that can reinforce each chapter's lessons.

The novel coronavirus SARS-CoV-2, which causes the disease known as COVID-19, has infected people in 212 countries so far and on every continent except Antarctica. Vast changes to our home lives, social interactions, government functioning and relations between

countries have swept the world in a few months and are difficult to hold in one's mind at one time. That is why a collaborative effort such as this edited, multidisciplinary collection is needed. This book confronts the vulnerabilities and interconnectedness made visible by the pandemic and its consequences, along with the legal, ethical and policy responses. These include vulnerabilities for people who have been harmed or will be harmed by the virus directly and those harmed by measures taken to slow its relentless march; vulnerabilities exposed in our institutions, governance and legal structures; and vulnerabilities in other countries and at the global level where persistent injustices harm us all. Hopefully, COVID-19 will force us to deeply reflect on how we govern and our policy priorities; to focus preparedness, precaution, and recovery to include all, not just some. Published in English with some chapters in French.

As part of the American Medical Association (AMA)'s Accelerating Change in Medical Education Consortium's work, Health Systems Science (HSS) is establishing itself as the third major branch of a balanced medical education, alongside basic and clinical sciences. Health Systems Science Review is a first-of-its-kind review book designed to prepare future physicians and other health care professionals to function effectively within health systems by better understanding how health care is delivered, how health care professionals work together to deliver that care, and how the health system can improve patient care and health care delivery. This study tool provides case-based questions followed by discussions of answers and suggested readings—making it a valuable review resource for medical students and instructors, as well as medical residents; nursing, allied health, and public health students; and hospital administrators. Meets a growing need for an effective, targeted review tool on HSS, a topic increasingly covered on the USMLE and other exams. Contains 250+ case-based, multiple-choice questions, with extensive discussion of correct and incorrect answers. Offers an up-to-date, effective review to support and assess competence in HSS, covering health care delivery and processes, health care policy and economics, clinical informatics and technology, social determinants of health, patient safety, teamwork and collaboration, systems thinking and complexity science, and much more. Provides highly relevant content applicable to today's evolving health care delivery written by experts in emerging areas of HSS. Serves as an excellent study companion for the ground-breaking book, Health Systems Science, by Susan E. Skochelak, MD, MPH, et al., also developed by the AMA's Accelerating Change in Medical Education Consortium, which is at the forefront of change and innovation in medical education.

Why are rainfall, carcinogens, and primary care physicians distributed unevenly over space? The fourth edition of the leading text in the field has been updated and reorganized to cover the latest developments in disease ecology and health promotion across the globe. The book accessibly introduces the core questions and perspectives of health and medical geography and presents cutting-edge techniques of mapping and spatial analysis. It explores the intersecting genetic, ecological, behavioral, cultural, and socioeconomic processes that underlie patterns of health and disease in particular places, including how new diseases and epidemics emerge. Geographic dimensions of health care access and service provision are addressed. More than 100 figures include 16 color plates; most are available as PowerPoint slides at the companion website. New to This Edition: *Chapters on the political ecology of health; emerging infectious diseases and landscape genetics; food, diet, and nutrition; and urban health. *Coverage of Middle East respiratory syndrome, Ebola, and Zika; impacts on health of global climate change; contaminated water crises in economically developed countries, including in Flint, Michigan; China's rapid industrial growth; and other timely topics. *Updated throughout with current data and concepts plus advances in GIS. Pedagogical Features: *End-of-chapter review questions and suggestions for further reading. *Section Introductions that describe each chapter. *"Quick Reviews"--within-chapter recaps of key concepts. *Bold-faced key terms and an end-of-book glossary.
