

Lifesaving Rescue And Water Safety Instructors Manual

Covers lifeguarding responsibilities along with information on such topics as rescue breathing, CRP and AED, supplemental oxygen support, spinal injury management, handling risks, and professionalism.

Discusses the history and techniques of swimming and diving, safety rescue techniques, and skills for a variety of aquatic activities.

Since the first edition of the Handbook on Drowning in 2005, many epidemiological data have confirmed the burden of drowning in several parts of the world. Studies have increased the understanding of effective drowning prevention strategies, rescue techniques and treatment options. Much has been learned about submersion and immersion hypothermia, SCUBA-diving injuries, the life-saving preparations of water-related disasters and how to deal with forensic investigations. In this updated second edition, experts from around the world provide a complete overview of current research data, consensus statements and expert opinions. The book Drowning provides evidence-based practical information and has a unique informative value for various groups with tasks, duties and responsibilities in this domain. In addition, the book may be an inspiration for future networks and research initiatives.

Surfing has been described as a sport, a religion, an obsession and a way of life. For Shaun Tomson, world champion surfer and successful entrepreneur, surfing is all of that and more. In *Surfer's Code*, Tomson shares the life lessons he's gathered over many years of surfing - from his boyhood in South Africa to the World Tour in the 70s and 80s. While the lessons Tomson shares are taken from beaches all over the world, they translate powerfully to everyday life and the extraordinary challenges we face. They reflect the attitude and outlook necessary to survive not only the ups and downs of life, but to master them and emerge a winner. His lessons include: I will never turn my back on the ocean; I will always paddle back out; I will watch out for other surfers; there will always be another wave; I will catch a wave every day.

Unique resource that addresses the global problem of drowning victims from an international perspective All contributors to this book are associated with *Intensive Care Medicine* which is a highly ISI rated Springer society journal

Provides instruction in water safety, rescue and emergency care.

The World Health Organization's recently published *Global Report on Drowning* found that drowning is the third leading cause of unintentional injury death worldwide—making the information presented in this new book an important part of the global effort to reduce this health risk. Written by leading researchers and academics from around the world, *The Science of Beach Lifeguarding* focuses on the scientific evidence that underpins what is taught to and practised by beach lifeguards. It is the first book to pull together all the different areas involved in beach lifeguarding and evaluate their evidence base. An accessible and informative reference underpinned by the best current research, the book's key themes cover the context of beach lifeguarding, the physical environment in which lifeguards work, medical aspects, practical lifeguarding techniques, physiological standards for lifeguards, safety education, and future developments in beach lifeguarding. The book presents groundbreaking work quantifying the scientific rationale behind a universally accepted fitness standard. It supplies an in-depth examination of the risks and hazards associated with the beach environment, including rip currents and cold water immersion. The book includes a state-of-the-art review of drowning and a comprehensive chapter on first aid. Detailing the recently announced 2015 European Resuscitation Council Guidelines, this book is a must-have for beach lifeguards, beach lifeguard managers, search and rescue personnel, paramedics, sports scientists, health and safety practitioners, and occupational health practitioners.

This book was planned and written as a resource to which anyone interested in water safety can refer, and from which a great deal of useful information can be gained. At the same time it is designed to be the textbook upon which Red Cross lifesaving training courses are based, to be used by both instructor and pupil as an authoritative source of knowledge and information.

This book is a fascinating account of the financial disaster which overtook Southeast Asia in 1997. The author explains the causes, events, reactions, and effects of the Asian currency crisis. Starting with the crash of the Thai baht, Professor Tan traces the chain of events and details the economic, social and political consequences in the countries involved, plus the responses of the major economic institutions like the World Bank and IMF are described. He also includes a chapter on the Asian economic miracle in the years before the crash, and asks whether that sort of growth is sustainable anyway. The final chapters deal with the lessons to be learned and the possible paths to recovery. This book is essential reading for anyone in the fields of finance, economics, or politics, but it is also interesting and accessible to the lay reader with an interest in world economies.

"Far too many people around the world know the pain of losing a loved one to drowning. Each year almost 360,000 people die from drowning--over 90% of them in low- and middle income countries. More than half of these deaths are among those younger than 25, with children aged under 5 facing the greatest risk. Drowning is the third leading cause of death worldwide for those aged from 5 to 14. Despite these tragic facts, drowning prevention gets relatively little attention and few resources. There is far more we can do to prevent drowning. Global commitments made as part of the Sustainable Development Goals, for example, cannot be met as long as this preventable cause of death is left largely unchecked. All of us--policymakers, parents, non-profit organizations, businesses and concerned citizens--can help prevent drowning. Explaining how is the goal of this guide. Building on the World Health Organization's 2014 Global report on drowning, the following pages provide practical, step-by-step guidance on how to implement 10 effective measures to prevent drowning. They range from community-based solutions, such as day care for children and barriers controlling access to water, to effective national policies and legislation around water safety, including setting and enforcing boating, shipping and ferry regulations. Data show that all of these solutions can help save lives. The more we work together to implement the measures outlined in this guide, the more lives can be saved. We urge all concerned to adopt as many of the interventions and strategies as their resources will allow, and to protect those most vulnerable without delay."--Page iv.

Swimming is a fun but dangerous activity. Lifeguards help us stay safe while having fun, thanks to their special life-saving skills and first-aid training. Readers learn about these community heroes and explore a typical day in the life and the requirements needed to perform this job. The WHO Global report on drowning: preventing a leading killer highlights that 372,000 people drown worldwide each year. Drowning is among the ten leading causes of death for children and young people in every region of the world. The report sets out the evidence showing a range of effective drowning prevention strategies, and makes a number of recommendations for concrete measures to be taken by national and local governments. With the release of this report, WHO aims to galvanize attention and action to this issue by highlighting how collaboration across sectors can save lives.--Publisher description.

As the number of community pools and waterparks grows nationwide, participation in aquatic activities is also growing. Lifeguards must receive proper and effective training, and maintain their skills to ensure their ability to work effectively with others as a part of a lifeguard team. This manual will supplement your in-service training to keep your knowledge and skills sharp.

Excerpt: A lifeguard supervises the safety and rescue of swimmers, surfers, and other water sports participants such as in a swimming pool, water park, or beach. Lifeguards are strong swimmers and trained in first aid, certified in water rescue using a variety of aids and equipment depending on requirements of their particular venue. In some areas, lifeguards are part of the emergency services system to incidents and in some communities, the lifeguard service also carries out mountain rescues, or may function as the primary EMS provider. A lifeguard is responsible for the safety of people in an area of water, and usually a defined area immediately surrounding or adjacent to it, such as a beach next to an...
