key concepts and processes in management and cost accounting through his textbooks. Now in its tenth edition, Management and Cost Accounting has been the leading textbook in the field for three decades, and continues to blend theory and practice in language that is clear and accessible. As well as covering everything students need to know for management accounting and cost accounting modules on undergraduate courses, or postgraduate students studying these topics for the first time, this book will also help prepare those taking the professional accounting bodies' management and cost accounting examinations. The new edition has been completely updated to reflect recent developments in the field, and now includes additional emphasis on value creation, and links strategic performance management more closely to divisional financial performance measurement. An entirely new chapter has also been added looking at the challenges management accountants will face in the future. Aimed at non-accounting management students, this textbook offers a thorough introduction to management accounting, approaching the subject from a managerial perspective, without sacrificing accuracy or detail.

Standard costing is the foundation upon which much management accounting and budgetary practice rests, yet it is often misunderstood. In this book Colin Drury sets out the nature and scope of standard costing whilst clearly identifying its limitations. The calculation and interpretation of the full range of cost accounting variances is covered, together with the formal analysis of the decision to investigate variances. The way in

which standard costing information is recorded in the accounts is also dealt with in depth, as this step is essential to a full appreciation of the role of standard costing. Finally, the usefulness of traditional standard costing techniques in a modern production environment is assessed.

This text aims to provide a thorough understanding of management accounting and is designed principally for students preparing themselves for professional examinations. It features case studies and a lecturers' support pack.

This is a text for introductory courses on cost and management accounting. It provides coverage of the elementary principles and techniques of costing and management accounting, and concentrates on the typical syllabus of a first year BA course.

Merrett provides a concise but comprehensive treatment of one of the central issues in environmental management. Informed by an evolutionary political economy perspective, this text draws on a worldwide range of case studies and examples.

For over forty years, Colin Drury has expertly helped learners understand and apply the key principles of management accounting. Now in its eighth edition, *Management Accounting for Business* continues his trademark clear and accessible style, covering everything non-specialist students need to know for success. Every chapter has been updated to include international real-world examples, an 'Apply your Knowledge' exercise, illustrating financial and non-financial considerations, as well as new review problems. Introducing emerging technologies such as big data, the Internet of Things and AI, this edition has been comprehensively revised by Colin Drury's academic colleague and co-author, Mike Tayles.

Management accounting has been the basic toolbox in business administration for decades. Today it is an integral part of all curricula in business education and no student can afford not to be familiar with its basic concepts and instruments. At the same time, business in general, and management accounting in particular, is becoming more and more international. English clearly has evolved as the "lingua franca" of international business. Academics, students as well as practitioners exchange their views and ideas, discuss concepts and communicate with each other in English. This is certainly also true for management accounting and control. Management Accounting is becoming more and more international. *Management Accounting and Control* is a new textbook in English covering concepts and instruments of management accounting at an introductory level (primarily at the Bachelor level, but also suited for general management and MBA courses due to a strong focus on practical relevance). This textbook covers all topics that are relevant in management accounting in business organizations that are typically covered in German and Central European Bachelor courses on management accounting and control. After a general introduction to the field of management accounting and control the book discusses cost management as an extension of cost accounting. Typical cost management instruments such as target costing, life cycle costing and process-based costing approaches are explained in detail. Differences between Anglo-American activity-based costing (ABC) and German process-based costing are highlighted. The book then turns to an extensive discussion of planning and budgeting tasks in management accounting with a strong focus on the practical application of the topic such as developing a budget in practice. Another chapter is dedicated to a comparison of traditional budgeting with modern /alternative budgeting approaches. A major part of the book is dedicated to the broad area of performance

management. The relevance of financial statement information for performance management purposes is discussed in detail. In addition, the most widely spread financial performance indicators are illustrated using real-world examples. The book also includes detailed content on value-based management control concepts. In a consecutive chapter, performance measurement is linked with strategy while extensively discussing the Balanced Scorecard as a key tool in strategic performance management. The remaining parts of the book deal with management reporting as one of the main operative tasks in management accounting practice. The book closes with insight into new fields and developments that currently influence management accounting practices and research and promise to play an increasingly important role in the future.

The purpose of cost and management accounting is to provide managers with information which helps them to control, plan and make decisions. The second edition of this popular book, covers the principles and techniques of this subject area including the basic methods and procedures. It will prove invaluable to students on a wide range of business and professional courses.

This text presents strategic and traditional management accounting topics and, where appropriate, revision questions will compare approaches of both methods. Beginning with learning objectives, each chapter is example driven, introducing basic concepts and leading to more complex examples.

Building on his pathbreaking, award-winning bestseller, *Relevance Lost*, H. Thomas Johnson presents a devastating critique of the top-down hierarchical accounting systems that have dominated American corporations since the 1950s. In *Relevance Regained*, Johnson shows exactly how "managing by remote control" through results-oriented accounting information has obstructed the real business objective: to reduce process variation and lead times for the purpose of obtaining and keeping satisfied customers. The failure of most American businesses to be competitive and profitable, he contends, is their reliance on management accounting information to control people's actions and productivity. Cost-focused imperatives from on high must be replaced, Johnson asserts, with information systems that link actions with imperatives of global competition. Self-managing work teams, according to Johnson, must own problem-solving information to reduce variation, delays, and excess in processes. Johnson prescribes the necessary changes in management principles that must replace the outdated style associated with the industrial revolution. Responsiveness to customers—not accounting costs—and flexibility—reducing lead times and removing constraints—are necessary for sustained competitive excellence and long-term profitability. Johnson discusses the radical overhauls of companies, such as

General Electric's work-outs/"best practices" program and Harley-Davidson's work simplification programs, and shows how these strong commitments to new strategies maximize a company's most important assets: people and time. To be globally competitive, he claims, a company's work must be directed toward selling to customers, not just selling products.
