This book is the most comprehensive reference ever written for individuals interested in law enforcement selection. The chapters contain meta-analyses (statistical reviews of the literature) investigating the validity of methods used to predict police performance. These methods include education requirements, cognitive ability, background variables (e.g., military experience, arrest record, discipline problems at work), personality inventories, interest inventories, physical agility tests, assessment centers, and interviews. The first chapter in the book is a short primer on meta-analysis that informs the reader about the purpose of meta-analysis and how to interpret the meta-analysis tables contained in the book. Chapter 2 describes the methods used to conduct the meta-analyses for this project. Chapters 3-11 list the meta-analysis results for the various predictors of police performance. Chapter 12 describes a meta-analysis of the relationships among criteria (e.g., performance ratings, discipline problems, commendations), Chapter 13 describes a meta-analysis of the relationships among selection methods, and Chapter 14 describes a meta-analysis of the relationship between the various criteria and sex, race, age, and tenure. Chapter 15 summarizes the previous chapters and identifies future research needs.

"This is a great text. It is comprehensive and easy to understand. The illustrations will enable students to learn and remember the information. This is the first research methods text I have read that is actually fun to read." —Tina L.

Freiburger, University of Wisconsin-Milwaukee Research Methods in Criminal Justice and Criminology connects key concepts to real field research and practices using contemporary examples and recurring case studies that demonstrate how concepts relate to students' lives. Authors Callie M. Rennison and Timothy C. Hart introduce practical research strategies used in criminal justice to show students how a research question can become a policy that

changes or influences criminal justice practices. The book's student-driven approach addresses both the why and the how as it covers the research process and focuses on the practical application of data collection and analysis. By demonstrating the variety of ways research can be used and reinforcing the need to discern quality research, the book prepares students to become critical consumers and ethical producers of research. In 1989, the Commission on Accreditation for Law Enforcement Agencies mandated that every police authority seeking accreditation with the Commission must have access to psychological support and consultation. This timely text offers an extensive and current overview of the services psychologists can offer to law enforcement. Organized under major subject areas--assessment, intervention, consultation and training--it deals with such issues as officer recruit selection, fitness for duty evaluations, stress counseling, hostage negotiation, investigative hypnosis, psychological profiling, management consultations and much more.

This summary report deals with a vast array of issues, each of which could be the subject of extensive recommendations for action. It aims to comprehensively state the case for reform and the extent of reform required, and to present a series of recommendations.

In a world of modern, involved, caring parents, why are so many kids aggressive and cruel? Where is intelligence hidden in the brain, and why does that matter? Why do cross-racial friendships decrease in schools that are more integrated? If 98% of kids think lying is morally wrong, then why do 98% of kids lie? What's the single most important thing that helps infants learn language? NurtureShock is a groundbreaking collaboration between award-winning science journalists Po Bronson and Ashley Merryman. They argue that when it comes to children, we've mistaken good intentions for good ideas. With impeccable storytelling and razor-sharp analysis, they demonstrate that many of modern society's strategies for nurturing children are in fact backfiring--because key twists in the science have been overlooked. Nothing like a parenting manual, the authors' work is an insightful exploration of themes and issues that transcend children's (and adults') lives.

This research report analyses the impact of information technology on policing, using the QPS as a case study. Predictive policing is the use of analytical techniques to identify targets for police intervention

with the goal of preventing crime, solving past crimes, or identifying potential offenders and victims. These tools are not a substitute for integrated approaches to policing, nor are they a crystal ball. This guide assesses some of the most promising technical tools and tactical approaches for acting on predictions in an effective way.

This brief focuses on the “doing” of procedural justice: what the police can do to implement the principles of procedural justice, and how their actions can improve citizen perceptions of police legitimacy. Drawing on research from Australia (Mazerolle et al), the UK (Stanko, Bradford, Jackson et al), the US (Tyler, Reisig, Weisburd), Israel (Jonathon-Zamir et al), Trinidad & Tobago (Kochel et al) and Ghana (Tankebe), the authors examine the practical ways that the police can approach engagement with citizens across a range of different types of interventions to embrace the principles of procedural justice, including: · problem-oriented policing · patrol · restorative justice · reassurance policing · and community policing. Through these examples, the authors also examine some of the barriers for implementing procedurally just ways of interacting with citizens, and offer practical suggestions for reform. This work will be of interest for researchers in criminology and criminal justice focused on policing as well as policymakers.

"This book is an exceptional introduction to some difficult ideas. It is full of downright good advice for every academic who wants to do something practical to improve his or hers students' learning." Paul Ramsden, Brisbane, Australia "Biggs and Tang present a unified view of university teaching that is both grounded in research and theory and replete with guidance for novice and expert instructors. The book will inspire, challenge, unsettle, and in places annoy and even infuriate its readers, but it will succeed in helping them think about how high quality teaching can contribute to high quality learning." John Kirby, Queensland University,

Ontario, Canada This best-selling book explains the concept of constructive alignment used in implementing outcomes-based education. Constructive alignment identifies the desired learning outcomes and helps teachers design the teaching and learning activities that will help students to achieve those outcomes, and to assess how well those outcomes have been achieved. Each chapter includes tasks that offer a 'how-to' manual to implement constructive alignment in your own teaching practices. This new edition draws on the authors' experience of consulting on the implementation of constructive alignment in Australia, Hong Kong, Ireland and Malaysia including a wider range of disciplines and teaching contexts. There is also a new section on the evaluation of constructive alignment, which is now used worldwide as a framework for good teaching and assessment, as it has been shown to: Assist university teachers who wish to improve the quality of their own teaching, their students' learning and their assessment of learning outcomes Aid staff developers in providing support for departments in line with institutional policies Provide a framework for administrators interested in quality assurance and enhancement of teaching across the whole university. The authors have also included useful web links to further material. Teaching for Quality Learning at University will be of particular interest to teachers, staff developers and administrators. Enjoyable mental exercises to help boost performance on IQ tests This engaging book offers readers the ultimate in calisthenics for the brain. The authors explore the implications of these research contexts, and discuss approaches and methodologies that researchers in these contexts might adopt, with a particular focus on ethics - one of the key concerns for students undertaking a research project of this type.

This undergraduate textbook examines how formal and informal tests are created, scored, and interpreted by mental health professionals when evaluating clients, and surveys the various techniques commonly used for assessing educational ability, intelligence, career and occupational aptitude, and clinical issues.

Signs of Change: Assessment Past, Present and Future Another Time, Another Place...Examinations Then and Now In the Temple of Literature in Hanoi, Vietnam, a series of stone stelae records the names of the handful of illustrious examination candidates who, in each century, passed the national examination to become a Doctor of Literature. Beginning in the

11th century, the exams were conducted personally by successive kings who pursued Confucian ideals that found expression in the enormous value placed on the pursuit of wisdom and learning. In the 21st century we are both puzzled and impressed by this tradition. Puzzled by such an explicit commitment to a meritocracy in an essentially feudal society; impressed by this enthusiasm for learning and the pursuit of wisdom at the highest level of society. Yet, there are also important similarities between the 11th and 21st centuries. Then, as now, assessment was associated with excellence, high standards, prestige and competition—success for the chosen few; disappointment for the majority. Then, as now, the pursuit of excellence was embedded in a social context that favoured the elite and determined success in terms of the predilections of the powerful. Then, as now, the purpose of the assessment, the way it was conducted and its impact on society all reflected the social and economic priorities of the day.

Third party policing represents a major shift in contemporary crime control practices. As the lines blur between criminal and civil law, responsibility for crime control no longer rests with state agencies but is shared between a wide range of organisations, institutions or individuals. The first comprehensive book of its kind, Third Party Policing examines this growing phenomenon, arguing that it is the legal basis of third party

policing that defines it as a unique strategy. Opening up the debate surrounding this controversial topic, the authors examine civil and regulatory controls necessary to this strategy and explore the historical, legal, political and organizational environment that shape its adoption. This innovative book combines original research with a theoretical framework that reaches far beyond criminology into politics and economics. It offers an important addition to the world-wide debate about the nature and future of policing and will prove invaluable to scholars and policy makers.

Mental, neurological, and substance use disorders are common, highly disabling, and associated with significant premature mortality. The impact of these disorders on the social and economic well-being of individuals, families, and societies is large, growing, and underestimated. Despite this burden, these disorders have been systematically neglected, particularly in low- and middle-income countries, with pitifully small contributions to scaling up cost-effective prevention and treatment strategies.

Systematically compiling the substantial existing knowledge to address this inequity is the central goal of this volume. This evidence-base can help policy makers in resource-constrained settings as they prioritize programs and interventions to address these disorders.
