In the nearly four decades since the First International Symposium on Victimology convened in Jerusalem in 1973, some concepts and themes have continued to hold a prominent place in the literature, while new ones have also emerged. Exploring enduring topics such as conceptions of victimhood, secondary and hidden victimization, and social services for victims along with more recent issues, the International Handbook of Victimology provides an interdisciplinary study of the topic from a diverse range of professionals on the cutting edge of victimology research. Forty experts from top research facilities and universities around the world provide input on the traditional longstanding issues that surround the field of victimology and explore newer themes such as restorative justice, the use of government-sponsored crime victimization surveys, compensation and restitution schemes, and victims' rights legislation. The second in a trilogy of volumes, this handbook examines victimology from criminology, sociology, psychology, law, and philosophy perspectives. Topics discussed include: Theoretical and historical frameworks used in the study of victimology Advances in research methods, including GIS technology Patterns of victimization, including drug- sex-, and work-related Responses to victimization by the victim and society Restorative justice issues Victimization as it occurs in various social divisions Describing current research and identifying new ideas and topics of concern, the book collectively presents the "state-of-the-art" of the field today. In doing so, it helps to inform contemporary understanding of an eternal societal plague. Those wishing to continue their studies should consult the International Handbook of Criminology and the International Handbook of Penology and Criminal Justice, which complete the trilogy. Humans are a recent event in the planet's history, but we've wasted little time in making our mark. The range of our achievements has created a rich and elaborate heritage that we have the unique ability to capture and record-meaning we can look back and learn from the road traveled. Timelines of History begins with the emergence of our earliest African ancestors and takes the reader through the history of cultures and nations around the world to arrive at the present day-the beginning of a new millennium. A dynamic, layered timeline zooms in and out of time, speeding up or slowing down to keep pace with the size and scope of events.

Sophocles II contains the plays "Ajax," translated by John Moore; "The Women of Trachis," translated by Michael Jameson; "Electra," translated by David Grene; "Philoctetes," translated by David Grene; and "The Trackers," translated by Mark Griffith. Sixty years ago, the University of Chicago Press undertook a momentous project: a new translation of the Greek tragedies that would be the ultimate resource for teachers, students, and readers. They succeeded. Under the expert management of eminent classicists David Grene and Richmond Lattimore, those translations combined accuracy, poetic immediacy, and clarity of presentation to render the surviving masterpieces of Aeschylus, Sophocles, and Euripides in an English so lively and compelling that they remain the standard translations. Today, Chicago is taking pains to ensure that our Greek tragedies remain the leading English-language versions throughout the twenty-first century. In this highly anticipated third edition, Mark Griffith and Glenn W. Most have carefully updated the translations to bring them even closer to the ancient Greek while retaining the vibrancy for which our English versions are famous. This edition also includes brand-new translations of Euripides' Medea, The Children of Heracles, Andromache, and Iphigenia among the Taurians, fragments of lost plays by Aeschylus, and the surviving portion of Sophocles's satyr-drama The Trackers. New introductions for each play offer essential information about its first production, plot, and reception in antiquity and beyond. In addition, each volume includes an introduction to the life and work of its tragedian, as well as notes addressing textual uncertainties and a glossary of names and places mentioned in the plays. In addition to the new content, the volumes have been reorganized both within and between volumes to reflect the most up-to-date scholarship on the order in which the plays were originally written. The result is a set of handsome paperbacks destined to introduce new generations of readers to these foundational works of Western drama, art, and life.

This collection of papers presents ideas and problems arising over the past 100 years regarding classical and quantum gravity, gauge theories of gravity, and spacetime transformations of accelerated frames. Both Einstein's theory of gravity and the Yang-Mills theory are gauge invariant. The invariance principles in physics have transcended both kinetic and dynamic properties and are at the very heart of our understanding of the physical world. In this spirit, this book attempts to survey the development of various formulations for gravitational and Yang-Mills fields and spacetime transformations of accelerated frames, and to reveal their associated problems and limitations. The aim is to present some of the leading ideas and problems discussed by physicists and mathematicians. We highlight three aspects: formulations of gravity as a Yang-Mills field, first discussed by Utiyama; problems of gravitational theory, discussed by Feynman, Dyson and others; spacetime properties and the physics of fields and particles in accelerated frames of reference. These unfulfilled aspects of Einstein and Yang-Mills' profound thoughts present a great challenge to physicists and mathematicians in the 21st century.
