We solicit high quality original research papers (and significant work in progress papers) in any aspect of Big Data with emphasis on 5Vs (Volume, Velocity, Variety, Value and Veracity), including the Big Data challenges in scientific and engineering, social, sensor IoT IoT, and multimedia (audio, video, image, etc) big data systems and applications. The authors wrote this text in response to the absence in the market of a text that would meet the needs of finance majors, but would still be accessible to all students. In many cases, as many as 80% of undergraduate corporate finance courses are filled with non-finance majors who are either intimidated by this course or who don't understand why they have to take the class (or both!). This text addresses the challenges all professors face: keeping students at varying degrees of ability and interest motivated and invested in the material.

The interfaith movement, which began with the 1893 World's Parliament of Religions in Chicago, has grown worldwide. Although this movement has been largely unknown to the public, it now provides a spiritual face for globalization, the economic and political forces leading us all from nationalism to "One World". The most ambitious organization in today's interfaith movement is the United Religions Initiative (URI), founded by William Swing, the Episcopal Bishop of California. Investigative reporter Lee Penn, a Catholic ex-Marxist, exhaustively documents the history and beliefs of the URI and its New Age and globalist allies, the vested interests that support these movements, and the direction they appear to be taking. The interfaith movement is no longer merely the province of a coterie of little-headed religious idealists with grandiose visions. The URI's proponents have ranged from billionaire George Soros to President George W. Bush, from the far-right Rev. Sun Myung Moon to the liberal Catholic theologian Hans Küng, and from the Dalai Lama to the leaders of government-approved Protestant churches in the People's Republic of China. The interfaith movement, including the URI, is being promoted by globalist and New Age reformers who favor erosion of national sovereignty, marginalization of traditional religions, establishment of "global governance", and creation of a new, Earth-based "global spirituality" in effect, a one-world religion. Therefore, the URI and the interfaith movement are poised to become the spiritual foundation of the New World Order: the "new civilization" now proposed by Mikhail Gorbachev, the last leader of the Soviet Union. In *The Reign of Quantity and the Signs of the Times*, French metaphysician René Guénon spoke of the "anti-tradition" (the forces of materialism and secular humanism) finally giving way to the "counter-tradition" (the satanic inversion of true spirituality), leading to the regime of Antichrist. The "anti-tradition" weakens and dissolves traditional spiritualities, after which the "counter-tradition" sets up a counterfeit in their place. Since Guénon's time, as is well known, anti-traditional forces have greatly advanced worldwide. It is less well-known that counter-traditional movements have also made great strides, and now stand closer to the centers of global political and religious power than ever before. The "counter-tradition" is making inroads on the political and cultural Right, as much as it is doing on the Left. *False Dawn* painstakingly documents these trends, and speculates on their future development. In so doing, the author takes investigative reporting to the threshold of prophecy, and gives us a stunningly plausible picture of the global religious landscape of the 21st century. This extraordinary project is the literary equivalent of turning over a flat rock. There is much to be seen and learned here—all of it unsettling, disquieting, occasionally downright scary. William Murchison, Radford Distinguished Professor, Baylor University When a bishop of a Christian church happily worships alongside a Wiccan invoking other gods, something has gone horribly wrong. In *False Dawn*, Lee Penn has produced a comprehensive and critical history of the United Religions Initiative. This book sounds a clear warning: Anyone who makes theological truth subservient to utopianism denigrates all religions. Douglas LeBlanc, Editor, GetReligion.org

Hello and welcome to *Effective PyCharm*. In this book, we're going to look at all the different features of one of the very best environments for interacting and creating Python code, PyCharm. PyCharm is an IDE (integrated development environment) and this book will teach you how you can make the most of this super powerful editor. The first thing we are going to talk about is why do we want to use an IDE in the first place? What value does a relatively heavyweight application like PyCharm bring and why would we want to use it? There are many features that make PyCharm valuable. However, let's begin by talking about the various types of editors we can use and what the trade-offs are there. We're going to start by focusing on creating new projects and working with all the files in them. You'll see there's a bunch of configuration switches we can set to be more effective. Then we're going to jump right into what I would say is the star of the show--the editor. If you're writing code, you need an editor. You will be writing a lot of code. This includes typing new text and manipulating existing text. The editor has to be awesome and aid you in these tasks. We're going to focus on all the cool features that the PyCharm editor offers. We'll see that source control in particular, Git and Subversion are deeply integrated into PyCharm. There are all sorts of powerful things we can do beyond git, including actual GitHub integration. We are going to focus on source control and the features right inside the IDE. PyCharm is great at "refactoring". Refactoring code is changing our code to restructure it in a different way, to use a slightly different algorithm, while not actually changing the behavior of the code. There are many powerful techniques in PyCharm that you can use to do this. Because it understands all of your files at once, it can safely refactor. It will even refactor doc strings and other items that could be overlooked without a deep understanding of code structures. There is powerful database tooling in PyCharm. You can interact with most databases including SQLite, MySQL, and Postgres. You can edit the data, edit the schemes, run queries and more. Because PyCharm has a deep understanding of your code, there is even integration between your database schema and the Python text editor. Note that PyCharm has a free version and a professional version. The database features are only available in the professional

version. PyCharm is excellent at building web applications using libraries like Django, Pyramid, or Flask. It also has a full JavaScript editor and environment so you can use TypeScript or CoffeeScript. We'll look into both server-side and client-side features. PyCharm has a great visual debugger, and we are going to look at all the different features of it. You can use it to debug and understand your application. It has powerful breakpoint operations and data visualization that typically editors don't have. Profiling is a common task if you want to understand how your code is running. If your application is slow and you want it to go faster, you shouldn't guess where it is slow. PyCharm makes it easy to look at the code determine what it fast and slow, rather than relying on our intuition which may be flawed. PyCharm has some tremendous built-in visual types of tools for us to fundamentally understand the performance of our app. PyCharm has built-in test runners for pytest, unittest, and a number of Python testing frameworks. If you are doing any unit testing or integration testing, PyCharm will come to your aid. For example, one feature you can turn on is auto test execution. If you are changing certain parts of your code, PyCharm will automatically re-run the tests. There are a couple of additional tools that don't really land in any of the above categories. There is a chapter with the additional tools at the end.

Anita Lahey's second collection, *Spinning Side Kick*, is a hard-knuckled look at the other half. These lively poems mix a girl-about-town cockiness with an all-too-rare emotional honesty about men, love, and relationships. Whether the subject is a one-man chimney demolition, the lifelong fidelity of seahorses, a lover at war in Afghanistan or a kickboxing match, Lahey confronts the enduring disconnect between the sexes in a language that is slangy and quick, punctuated with jabs. She eyes those moments—in a day, in a life—when the normal clues we rely on disappear, shifting the line between domesticity and danger. In *Spinning Side Kick*, a talented poet returns with sharper aim.

Anticipating a career in medicine, Dr. William A. Haseltine was in his first weeks of graduate studies at Harvard when a legendary physician-scientist offered this advice: "You can do more for human health through science than you ever could as a doctor." That advice hit him "like a thunderbolt"—and he took it. Since then, Dr. Haseltine has helped combat cancers, worked to contain the HIV/AIDS pandemic, and unlocked the power of the human genome to develop dozens of new pharmaceutical cures. His discoveries in molecular biology and genomics, amplified through his counsel at the highest level of government and in the public eye, have improved the health and lives of millions of people around the world. For the first time, Dr. Haseltine tells his life story—which is still unfolding—in *My Lifelong Fight Against Disease*, including facing devastating public health crises such as the COVID-19 pandemic, and highlighting exhilarating moments of medical discovery. In writing the story of his wide ranging career, Dr. Haseltine's goals are simple: to encourage the next generation to make their own significant contribution to human life, and for all readers to appreciate science as a humanistic enterprise. A compulsively readable and fast-paced insider's account of some of the most brilliant medical breakthroughs in modern history, *My Lifelong Fight Against Disease* is a candid, evocative, and ultimately revelatory exploration into what it means to make science your life.

People live in a sea of viruses. All creatures are host to these small organisms, which are made up of small bits of genetic information. Viruses are possessed by a drive to survive, but in order to reproduce they must invade a living cell. Dr. William A. Haseltine, PhD, has spent a lifetime studying viruses and their ability to adapt and flourish within an ever-changing environment. In *Variants! The Shape-Shifting Challenge of COVID-19*, Dr. Haseltine turns his focus to SARS-CoV-2, the virus that causes COVID-19. The variant forms of this coronavirus risk an even greater disruption to our lives, our economy, and the health and wellbeing of hundreds of billions worldwide. *Variants!* is a collection of Dr. Haseltine's writings and research on COVID-19 and SARS-CoV-2 mutations and variants. The book is a Living eBook, updated regularly with new information as it unfolds. In the academic year 1977-1978 Tilburg University celebrated its fiftieth anniversary. The commemoration involved specific scientific activities. The theme of 'Innovation', broadly defined as 'developments in sciences and society', offered the scientific framework in which these activities took place. The present volume is one of the results. It consists of the texts of a series of lectures held at the Department of Economics of Tilburg University. The Department's Colloquium Committee, set up to organize discussions on current research, arranged the lectures. On this occasion, the committee decided to draw attention to the multidisciplinary character of research in the area of NIEO, the New International Economic Order. The collection of papers that eventually resulted is published in this volume. - Gratitude is owed to the people, thanks to whom this volume could be published: to Mr. Ad Janssen, head of the Office of the Department of Economics for offering the secretarial facilities needed to 'process' the book, despite an understaffed office already facing excessive work; to the 'Fifty Years Tilburg University' Committee for creating the financial ways and means; to Mr. Jan Vingerhoets of the Development Research Institute of Tilburg University for his most valuable advice and help; to Mr. McGivern who gave the book its final form in English. Thanks also are due to Mr. Hans Sinner, responsible for Tilburg University Press; to Mr. van Vloten, publisher, Martinus Nijhoff, and to Mrs. Hinkenkemper, Miss Annelies Vugs and Dr. George Embree.
